Porcelain floor tiles with textured or abrasive surfaces may require some minor adjustments to your cleaning routine.

Traditional mop heads, made of cotton, which work well on unglazed, polished, or matte tiles, may not be as effective on these surfaces. The “grippier” finish of textured tiles can catch and pull the fibers of cotton mop heads, causing them to frizz and fall apart.

For optimal cleaning performance, consider using a microfiber mop head with looped edges. These mop heads are just as convenient as cotton but without the frizz and lint. They are easy to wring, more durable, and last longer than traditional mop heads, ensuring your floors stay clean and beautiful with minimal effort.

Microfiber Mop
